# Agenda

THE SETUP

DEMO

POP THE HOOD

DEMO

# THE SETUP

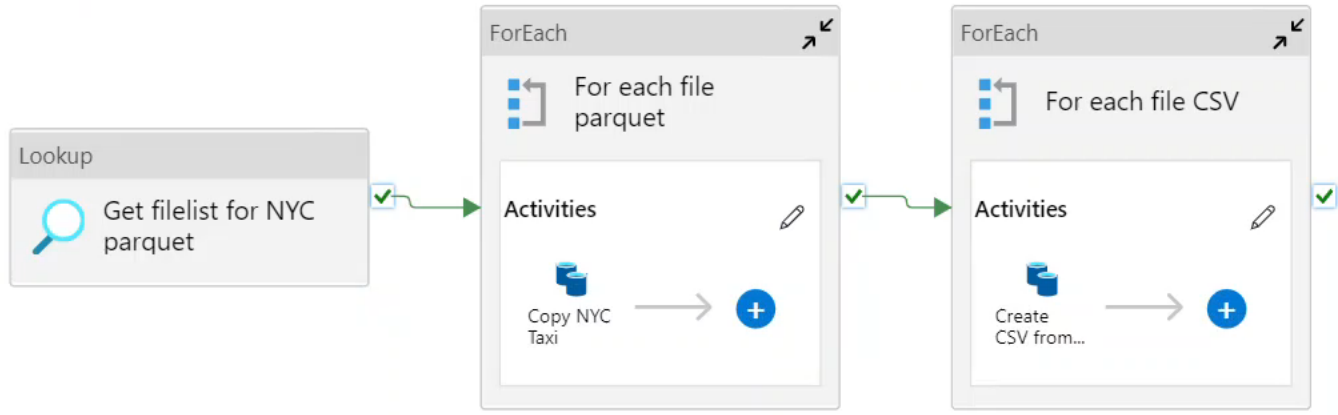

- NYC Taxi data from <https://www.nyc.gov>
- Data from Jan 2009 to Aug 2022
- Stored as parquet files in ADLSg2
- 1.685.246.650 trips / rows

THE DATALOAD

DEMO

- Search activities
- > Move & transform
  - > Azure Data Explorer
  - > Azure Function
  - > Batch Service
  - > Databricks
  - > Data Lake Analytics
  - > General
  - > HDInsight
  - > Iteration & conditionals
  - > Machine Learning
  - > Power Query

Parameters Variables Settings Output

+ New

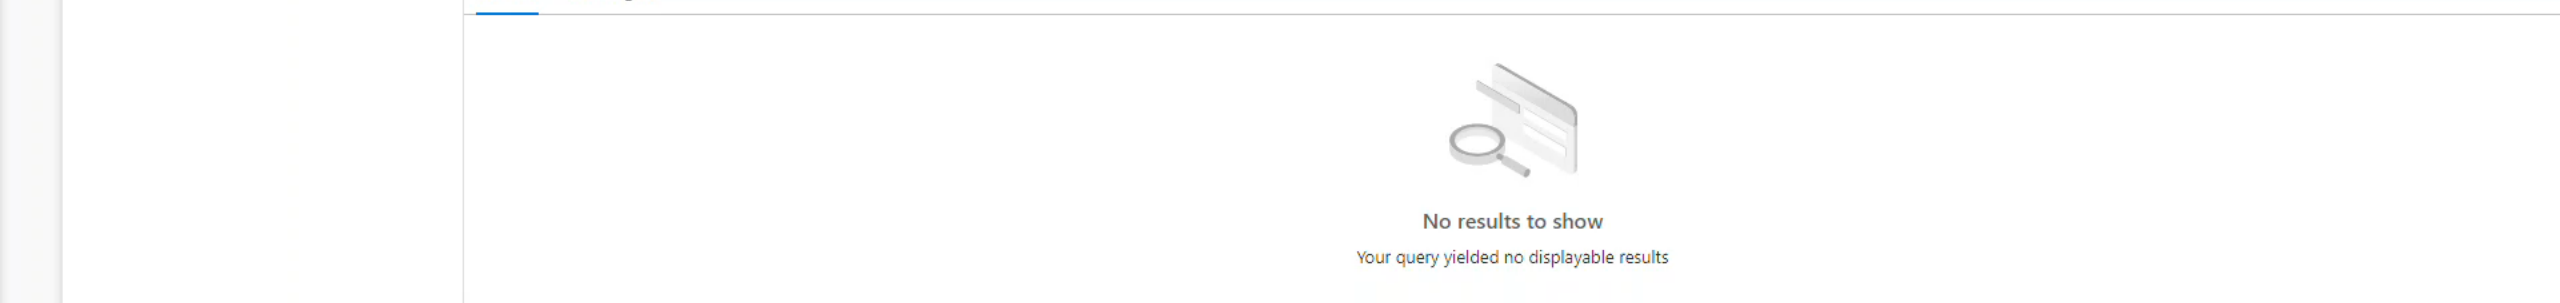

THE SERVERLESS SQL POOL

DEMO

```
1 -- create database
2 create database Chester
3
4 --use new database
5 use Chester;
6
7 --create schema
8 create schema nyctaxi
9
10 -- create credentials for containers in storage account
11 CREATE DATABASE SCOPED CREDENTIAL NYData
12 WITH IDENTITY='SHARED ACCESS SIGNATURE',
13 SECRET = 'sv=2021-06-08&ss=bfqt&srt=sco&sp=rwdlacupyx&se=2099-11-21T19:24:43Z&st=2021-11-21T11:24:43Z&spr=https&sig=qv3FPPcU0f3tPbs9LuMwXos2sA%2F3phLjIJe9o1lqzVU%3D'
14 GO
15
16 -- create the external data source
17 CREATE EXTERNAL DATA SOURCE ChesterDataSource WITH (
18     LOCATION = 'https://brianboenk.dfs.core.windows.net',
19     CREDENTIAL = NYData
20 );
21
22 -- create the external file format
23 CREATE EXTERNAL FILE FORMAT SynapseParquetFormat
24 WITH (
25     FORMAT_TYPE = PARQUET
26 );
27
28 -- create nyctaxi.allparquet view
29 create or alter view nyctaxi.allparquet as
30 SELECT
31     *
32 FROM
33     OPENROWSET(
34         BULK 'https://dslhowtobeadataengineer.dfs.core.windows.net/nyctaxi/parquet/yellow_tripdata_*.parquet'
```

THE COPARISON

DEMO

POP THE HOOD

DEMO

# Documentation from Microsoft

Maximum size of the result set	Up to 400 GB shared between concurrent queries.
Maximum concurrency	Not limited and depends on the query complexity and amount of data scanned. One serverless SQL pool can concurrently handle 1,000 active sessions that are executing lightweight queries. The numbers will drop if the queries are more complex or scan a larger amount of data.

# External table's performance

*In ad-hoc query scenarios, such as `SELECT FROM EXTERNAL TABLE`, PolyBase stores the rows that are retrieved from the external data source in a temporary table. After the query completes, PolyBase removes and deletes the temporary table. No permanent data is stored in SQL tables.*

[CREATE EXTERNAL TABLE \(Transact-SQL\) - SQL Server | Microsoft Learn](#)

**TempDB?**

TempDB?

DEMO

# The TempDB

Results Messages										
	file_id	file_guid	type	type_desc	data_space_id	name	physical_name	max_size_gb	growth

*The maximum number of concurrent PolyBase queries is 32*

[CREATE EXTERNAL FILE FORMAT \(Transact-SQL\) - SQL Server | Microsoft Learn](#)

# Considerations

SELECT .... FROM <external\_table> WHERE <field> = <value>

External tables loaded to Serverless has no index

Search predicate often is pushed down to the data lake

Joins on 100 rows pr table

Joins on 10 mio rows pr table

This just in... (From Microsoft Nov 11, 2022)

*..Queries process the entire dataset and don't benefit at all by partitions...*

This just in... (From Microsoft Nov 11, 2022)

But wait

# All the time in the world

Maximum query duration	30 minutes.
Maximum size of the result set	Up to 400 GB shared between concurrent queries.
Maximum concurrency	Not limited and depends on the query complexity and amount of data scanned. One serverless SQL pool can concurrently handle 1,000 active sessions that are executing lightweight queries. The numbers will drop if the queries are more complex or scan a larger amount of data.

# Key take aways

Work with data  
to fit the known  
TempDB  
configuration  
and file sizes

Know that you  
only have 100  
GB for #-tables,  
CTE's and table  
variables

Refit the data  
pipelines to  
partition your  
files to fit the  
engine

Can you do  
incremental  
loading, then  
do it – also in  
Power BI

Move your joins  
to after Synapse  
serverless –  
Power BI does a  
very good job
