# Tired of waiting for my SQL server

# So I tried the Azure Data Explorer

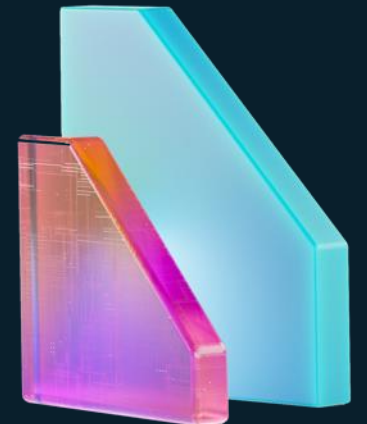

# SQL to KQL

Just write your SQL statements to the engine

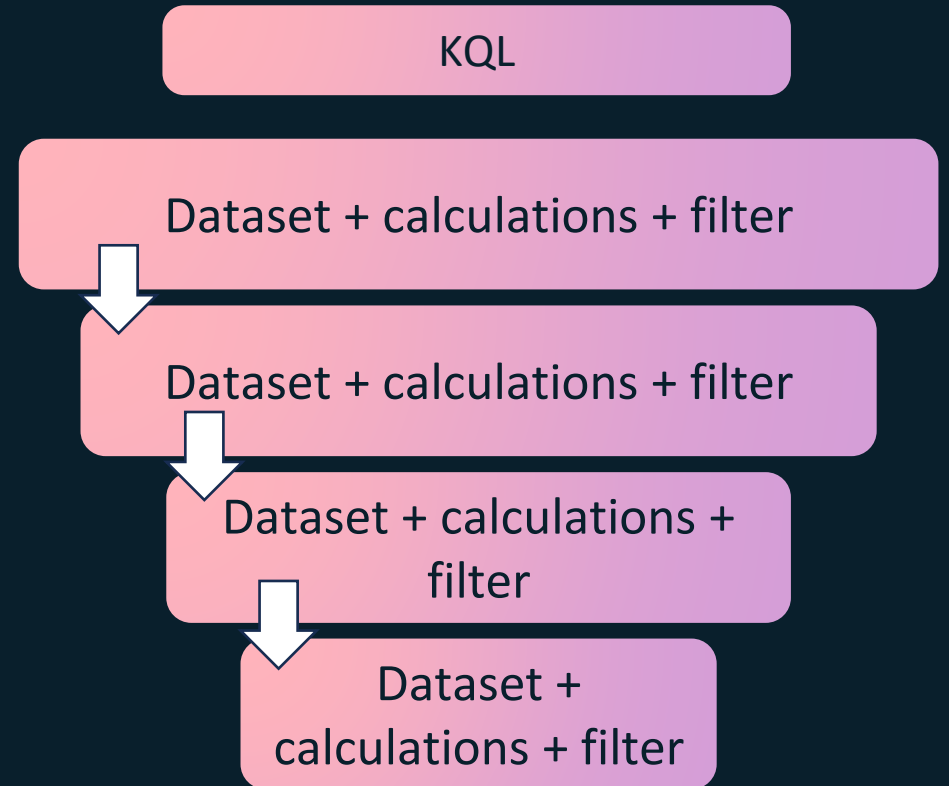

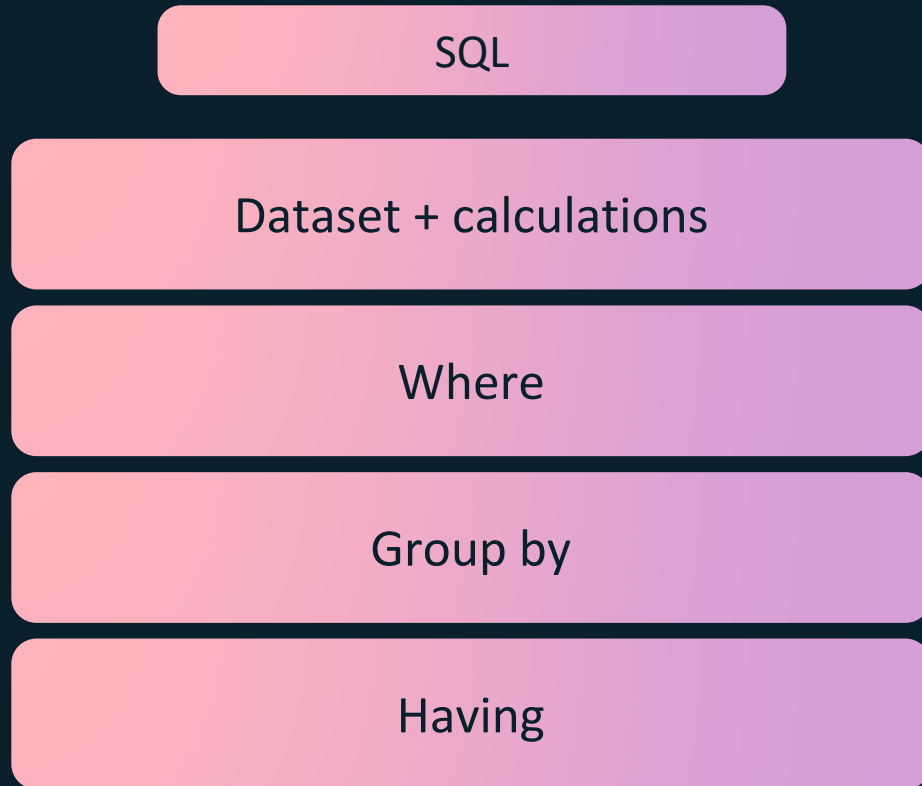

Use the EXPLAIN command

Learn the new stuff –  
like several WHERE clauses in the same script

Talk to your Data Scientist and  
learn together

# SQL to KQL

# DEMO

Live coding  
(hopefully no demo-ghost 👻)

# Recap on the KQL language

Easy to use and learn

Power full

Bridges gaps
