

A person is seen from the side, sitting at a desk in a dimly lit room. They are looking at several computer monitors. The monitors display various data visualizations, including maps, charts, and tables. The overall scene suggests a data analyst or a person working in a technical field. The text is overlaid on the image in a large, white, sans-serif font.

GraphQL with Materialized Lakehouse Views A Match Made in Heaven

SIMPLICITY

Materialized views pre-compute complex aggregations, while GraphQL's efficient data fetching ensures clients get only what they need. The combination means fast queries at both the data layer and API layer.

THE SOLUTION

PERFORMANCE

DEVELOPER
EXPERIENCE

SIMPLICITY

Application developers get a modern, self-documenting API that supports exactly the flexible querying patterns they need. No more requesting new endpoints for slight variations in data requirements.

THE SOLUTION

PERFORMANCE

DEVELOPER
EXPERIENCE

SIMPLICITY

Everything happens within Microsoft Fabric—no need to set up separate API gateways, manage connections between systems, or maintain complex infrastructure. Create your view, expose it through GraphQL, and you're done.

THANK YOU
